DETAILED ACTION

Claims Construction

The IPER in this application has a paragraph titled "Obvious error", in which it is pointed out that Scheme C in EP791597 is a reaction which is basically the same as appears in Scheme –IV in this case. The prior art reaction gives the product with an oxygen between the C(O) and the SO₂. The examiner agrees that the Scheme-IV reaction appears to be in error. It would proceed by the elimination of HOCl, and attaches to the electropositive C(O) an electropositive SO₂. Both of these things are very unlikely, although not impossible. The case has been searched both ways.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As noted above, the structure of Formula I is likely to be wrong. In order to fix this, applicants must a) present evidence that there is an extra oxygen and b) correct the formula wherever it appears.

Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

1. The limitation of "easily removable" is unclear. Where is the line between that and a protecting group which is removable only with some difficulty? Likewise for "easily hydrolysable"?
2. Claim 2 needs a definition for Formula I.
3. Regarding claim 3, 12 and 7, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).
4. Likewise for the "preferably" of claim 9 and 14.
5. The intended meaning for "silyl" is unclear. Silyl is SiH_3 , the group formed by the removal of a H from Silane, SiH_4 and is a term analogous to methyl, CH_3 . It does not appear likely that such a group is intended.
6. The definition of R_4 is unduly functional. Useful for what?
7. The R_3 definition in claim 5 is garbled. It says, " R_3 ... together with the COO^- group to which R_3 is attached is an ester or an alkali or alkaline earth metal". The "ester" part of that is correct, but COOR_3 cannot be an alkali metal.

Specification

Formula I must be fixed as indicated above if it is incorrect.
